To whom it may concern,

3DEZROUTING designs and distributes exclusive technology specific to school bus routing to school districts within the U.S. Our platform has numerous algorithms conceived and produced by our team of developers that enable school transportation departments to drastically increase the speed of the routine routing process.

There are exclusive characteristics that exist in the 3DEZR platform that are either foreign to other accessible programs or are overlooked by the competition as of the time of this writing.

The features below have been originated and incorporated directly into the 3DEZR platform and are also exclusive in reference to our pricing model;

**Route Consolidation:** Enables the district to consolidate routes on the fly for purposes that might include daily driver shortages.

**Move Trips:** Enables the user to quickly move any trip from one bus to another bus within seconds while all students remain assigned. This helps the user immediately swap trips due to breakdowns or accidents.

**Internal Pop-Up Training Guides:** Speeds up the learning process and provides specific details to the user while the routing process is active.

**Live Chat Support:** Enables immediate access to support within a few minutes anytime help is desired.

**Built in Parent/Driver/School Notification Feature:** Enables immediate notification via text, email and/or push notification via our phone app to inform all stakeholders of bus delays, bus schedule changes and more.

We appreciate your school district being a participant in the use of our technology, and we will provide as much support as we can to further the training and use by any district staff desiring to learn the 3DEZR platform.

Sincerely,

A handwritten signature in black ink, appearing to read "Dale Dorsey", with a long horizontal flourish extending to the right.
